BAG DUMPING STATION

- 1 Filter
- 2 Hood
- 3 Frame
- 4 Extraction

With integrated filter and vibrating extractor

With integrated filter and simple cone

With vibrating sieve

With lumpbreaker

With folding hood and remote filter

Multiple

Application

Ergonomic solution for manual handling of bags for feeding production or mixing machines, on pneumatic silos loading lines, or in dosing of minor ingredients.

Operating principle

Bags are placed manually on the protection grid and emptied. The dust filter prevents dust from leaking during the operation. The unloaded material is transferred to the receiving container by pneumatic or mechanical transport.

Benefits:

Clean and ergonomic design

It can be used with different bag sizes up to 50kg

Buffer up to 500l with load at ground level

Construction with rounded edges and low roughness inner surfaces for food use (EN 1672-1)

Easy access to internal parts for cleaning and material change

Can be combined with control and safety screening and lump breaking device
